MR-20FB Overview:

The MR Series is a robust vibratory bowl finishing machine built to handle continuous duty operation. Hammond Roto-Finish's proven welded-construction design was reimagined in 2011 to simplify manufacturing without sacrificing durability. The MR Series combines that innovative design with high-end features.

The MR-20 is available in four models; Manual, Semi-Auto, Automatic, and Accelerated Chemistry. General machine data and features are laid out below.

Machine Features:

Max operating capacity 17.0ft³ (481 L)

Heavy-duty 3/16" (4.75mm) welded construction

Main bowl construction component is a pressure vessel tank head

U shaped process channel with textured, straight wall polyurethane lining

Polyurethane lining is a minimum 5/8" (15.5mm) thick, with 50% additional in high wear areas Bowl is suspended on heavy duty coil springs

Two (2) sets of pop-in drains:

solid, 1/16" (1.5mm), 1/8" (3mm) & 1/4" (6.5mm) slots

Parts separation system with pneumatically operated gate

Water-driven compound system – mixes between 0% and 5% concentration

19 mm socket included for changing eccentric weights

Integrated lifting eyes

Grease lubrication

Available voltages:

230 VAC / 460VAC, 3ph, 60hz

(denotes factory installed – unless specified on order)

☐ Semi-Auto Model: MR-15S

Call

This is the baseline machine model. It features the shut off timer and pneumatically operated gate on the control panel. It can be upgraded to include a VFD.

VFD Upgrade Price Call

☐ Accelerated Chemistry Model: MR-20FB-C

Call

This model builds on the MR-20FB-S. In addition to the automatic processing and unloading, it features a second, electric compound pump, part recipe selection from the HMI, and acid proof construction. These features are required in a machine that produces the high luster finishes generated from accelerated chemistry processes.
